

The 3.7% economic growth is the result of the policies of President Daniel Noboa's government, which boosted exports and investment in 2025.

The economic policy actions implemented by President Daniel Noboa's government have allowed Ecuador's growth to reach 3.7% in 2025, exceeding the expectations of international organizations such as the IMF, World Bank, and ECLAC, which projected 3.2% growth for the Ecuadorian economy in 2025.

The main factors contributing to the country's growth were exports, which increased by 6.4%, and gross fixed capital formation (GFCF), that is, investment, which grew by 5.6%. This demonstrates that government actions have been redirected toward the sectors that drive and energize the Ecuadorian economy.

It is important to note that the remarkable performance in 2025 was based on a historic national productive reactivation evidenced by record levels of non-oil exports (shrimp, cocoa, bananas, canned fish, etc.), and it can be observed that non-oil gross value added grew by 4.6%.

Sixteen industries showed positive growth: electricity and water supply with 13% growth; fishing and aquaculture, 10%; financial and insurance activities, 9.8%; agriculture, livestock, and forestry, 8.6%; and food manufacturing, 8.5%, among others.

The National Government remains committed to working towards solid and sustained growth, including this year, and the figures demonstrate that we are on the right track. In January 2026, Ecuador's Monthly Indicator of Economic Activity (IMAEc) registered year-on-year growth of 2.2%, driven by the outstanding performance of the manufacturing (7.2%), oil and mining (6.1%), services (2.9%), commerce (2.7%), and construction (1.0%) sectors.

Likewise, the IMAEc's growth was supported by the non-oil economy, whose component registered a year-on-year variation of 2.6%.

These results generate confidence in the country and demonstrate that the National Government prioritizes the well-being of its citizens, investment, and national production to increase employment opportunities.
