Macroeconomic indicators

GOBIERNO DEL
ECUADOR

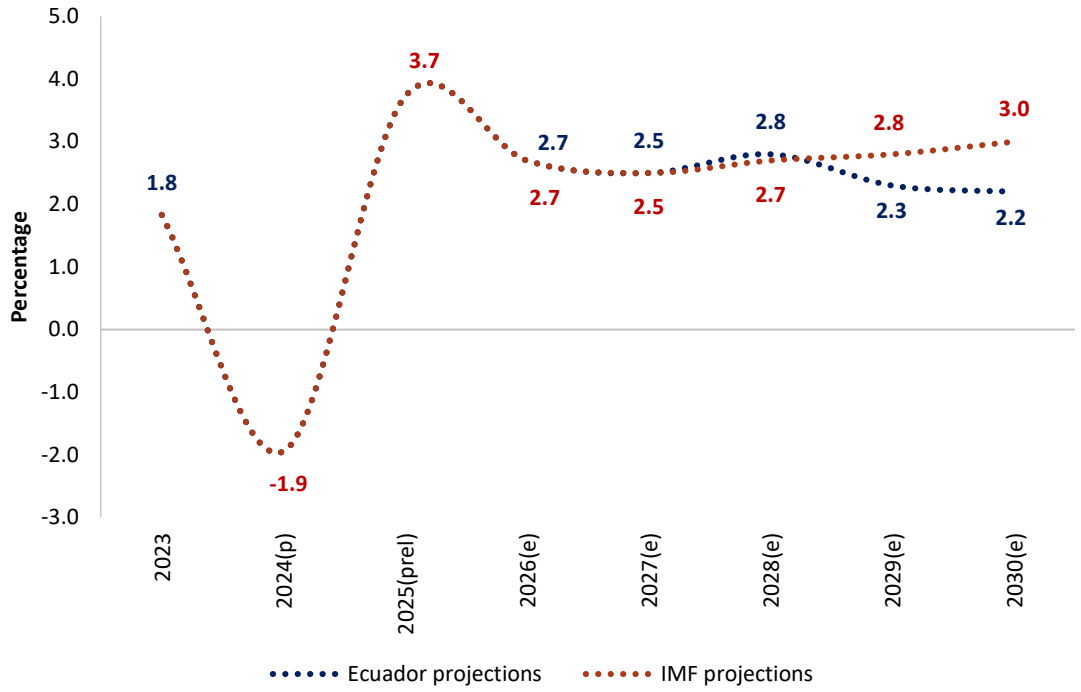

Economic growth prospects

According to the Central Bank, the Ecuadorian economy grew by 3.7% in 2025, driven by a recovery in exports, increased household consumption and gross fixed capital formation.

IMAEc

The Monthly Economic Activity Indicator for Ecuador (IMAEc) is a high-frequency estimate designed to provide near-immediate monitoring of developments in the various sectors of the national economy. In July 2026, the IMAEc recorded a cumulative variation of approximately 2.9%, indicating that economic activity continues to grow strongly, in line with the trend observed in 2025. The sectors that recorded the largest increases were: oil and mines; manufacturing and trade.

Balance of Payments

In the first semester of 2026, the current account showed a 37.4% decline compared to 2025, driven mainly by a decrease in the balance of goods and services as a result of rising oil imports. However, secondary income grew by 4.8%, primarily because of an increase in remittances (9.9%). It is important to note that, despite the decline, this result is one of the best results in recent years.

> Current account 2023-2026, II Quarter (Million USD FOB)

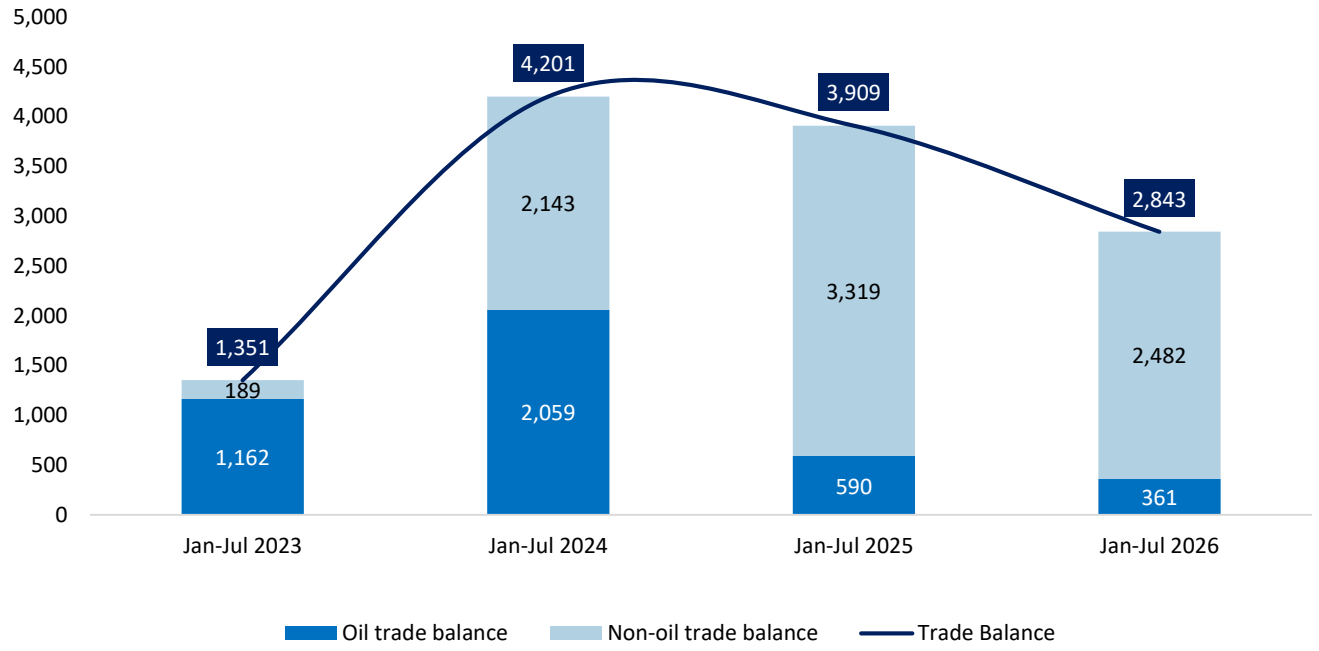

Source: CBE

External Sector

Between January and July 2026, the trade balance showed a surplus of USD 2,843 million despite a decline in the oil trade balance. Also, the non-oil trade balance remained in surplus following record export growth in 2025.

> Trade Balance Jan-Jul 2023-2026 (Millions USD FOB)

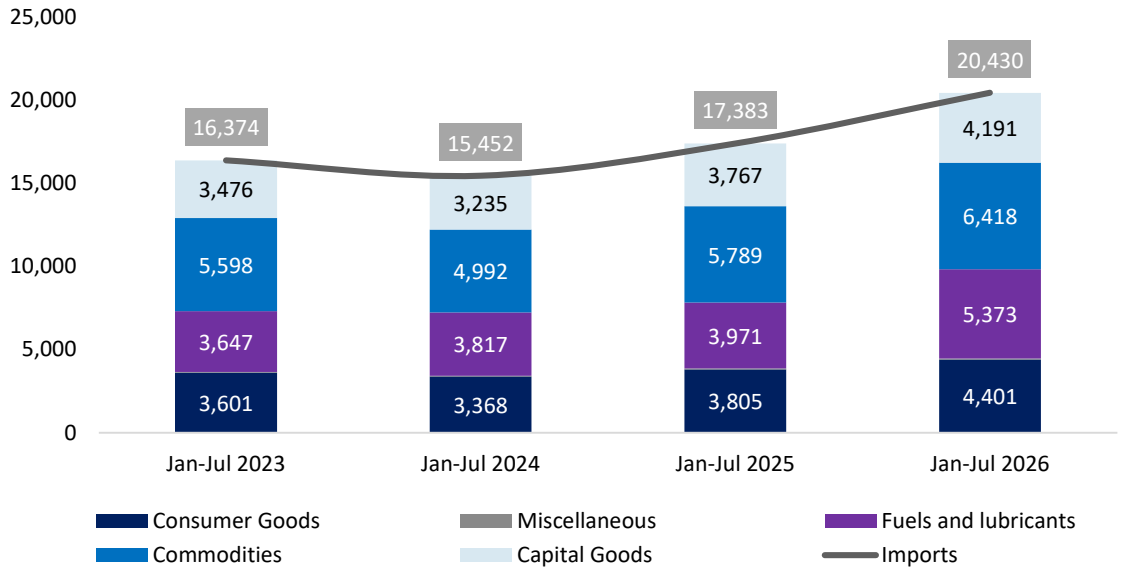

Source: CBE

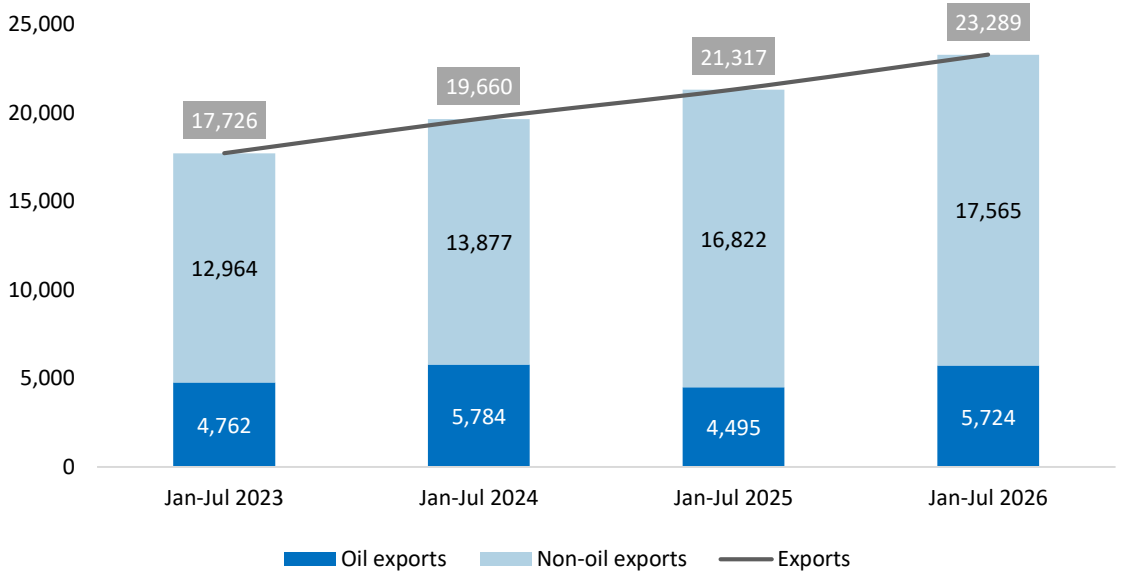

External Sector

Between January and July 2026, exports reached a value of USD 23,289 million, driven by an increase in both oil and non-oil exports. Similarly, the value of imports rose to USD 20,430 million due to growth in imports of fuel and lubricants, consumer goods, commodities and capital goods, as a result of an increase in production.

> Imports Jan-Jul 2023-2026 (Million USD FOB)

> Exports Jan-Jul 2023-2026 (Million USD FOB)

Notes: Imports excludes the account adjustment

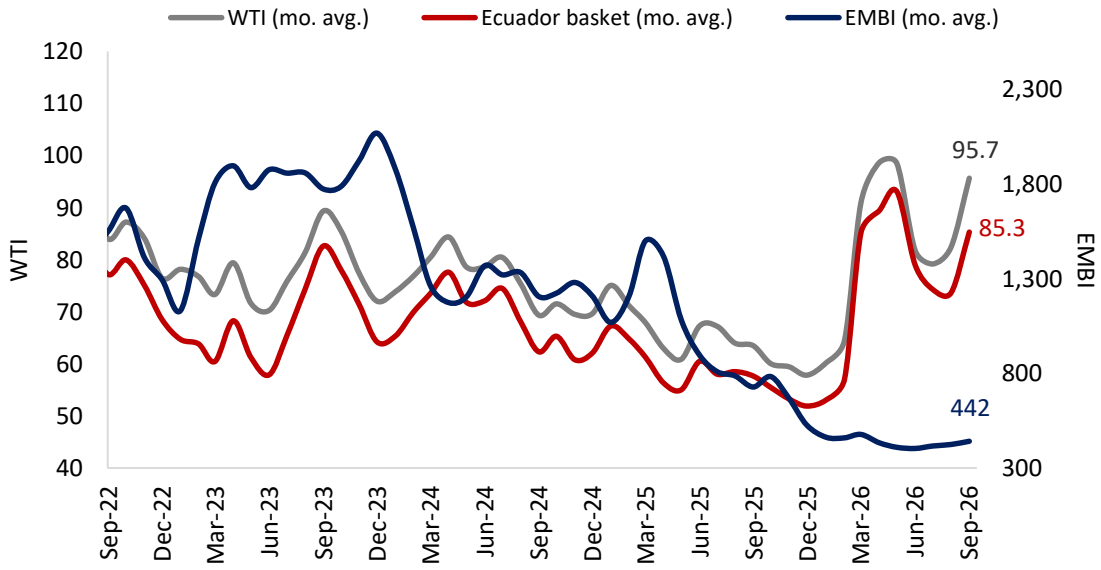

Oil overview

As of September 2026, oil production has shown operational stabilization compared to the previous year. This stability is due to the mitigation of the critical factors that caused the sharp decline in 2025. Through May, the international market had seen a steady increase in prices for both WTI and Ecuadorian crude, driven by volatility and geopolitical tensions stemming from the conflict in the Middle East. However, between June and August, the conflict subsided and prices fell. Nevertheless, prices rose again in September due to renewed uncertainty.

Employment

The labor market shows a positive outlook across most indicators.

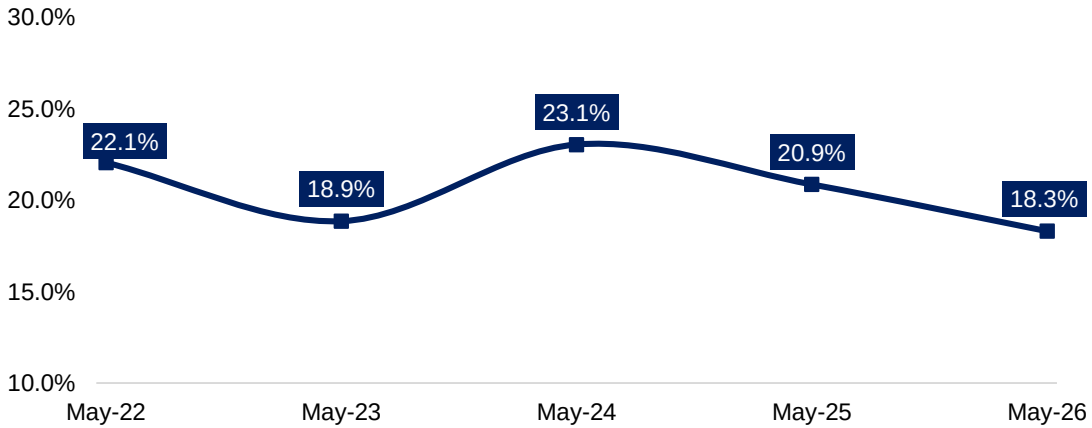

> Adequate employment rate (% EAP, May 2022-2026) (1)

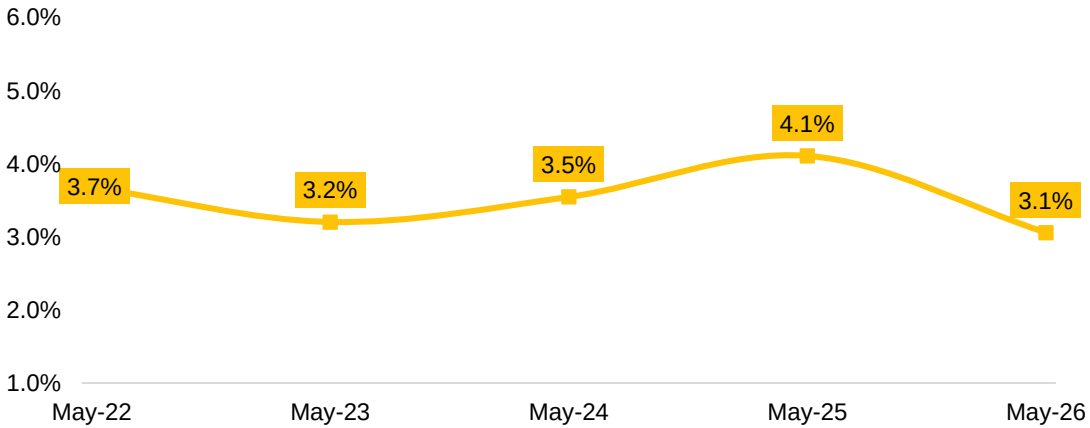

> Employment registered with Social Security (millions, May 2020-2026) (3)

> Underemployment rate (% EAP, May 2022-2026) (1)

> Unemployment rate (% EAP, May 2022-2026) (2)

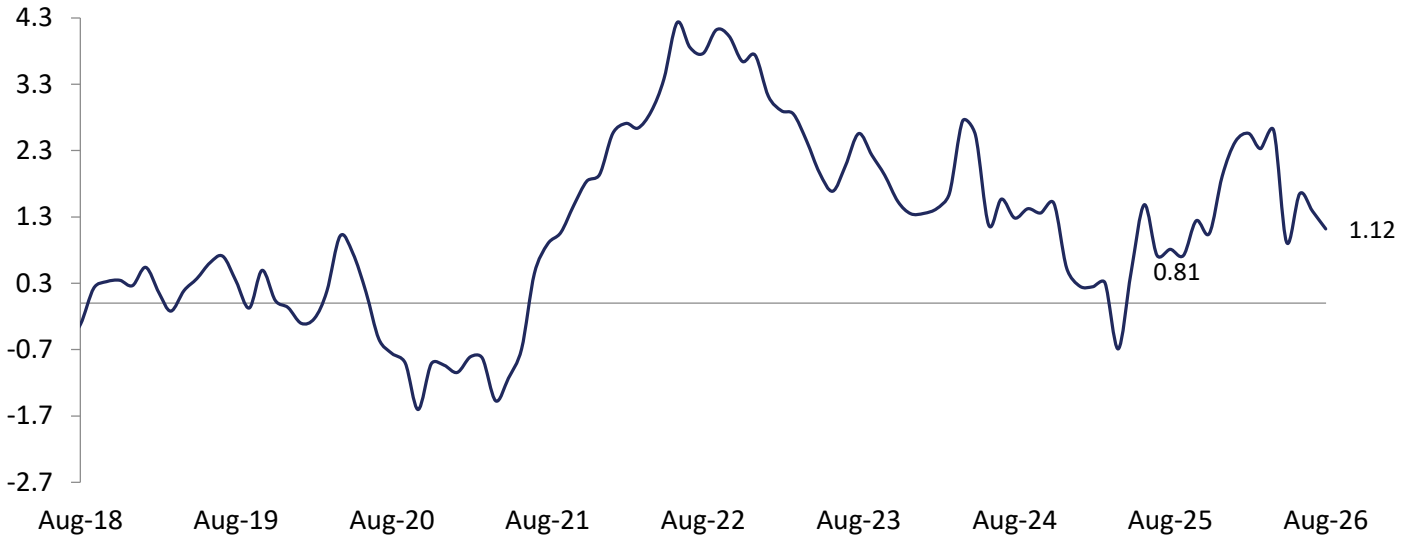

Source: INEC.
Note: Labor Market figures for June 2026 have not yet been released.
Note: (1) The differences between May 2025 and May 2026 are not statistically significant; (2) The differences between May 2025 and May 2026 are statistically significant: (3) The data presented in these tables are subject to variation, since the IESS database and other administrative records are transactional in nature; that is, changes or reprocessing of historical information may occur.

Inflation

Year-over-year inflation in August stood at 1.12%, driven by increasing prices for transport; insurance and financial services; and health. In the transportation division, price fluctuations were observed in fuel-related products, such as gasoline and diesel, driven by volatility in international oil prices as a result of the conflict in the Middle East.

> Annual headline inflation August 2018-2026 (YoY rates of change %)

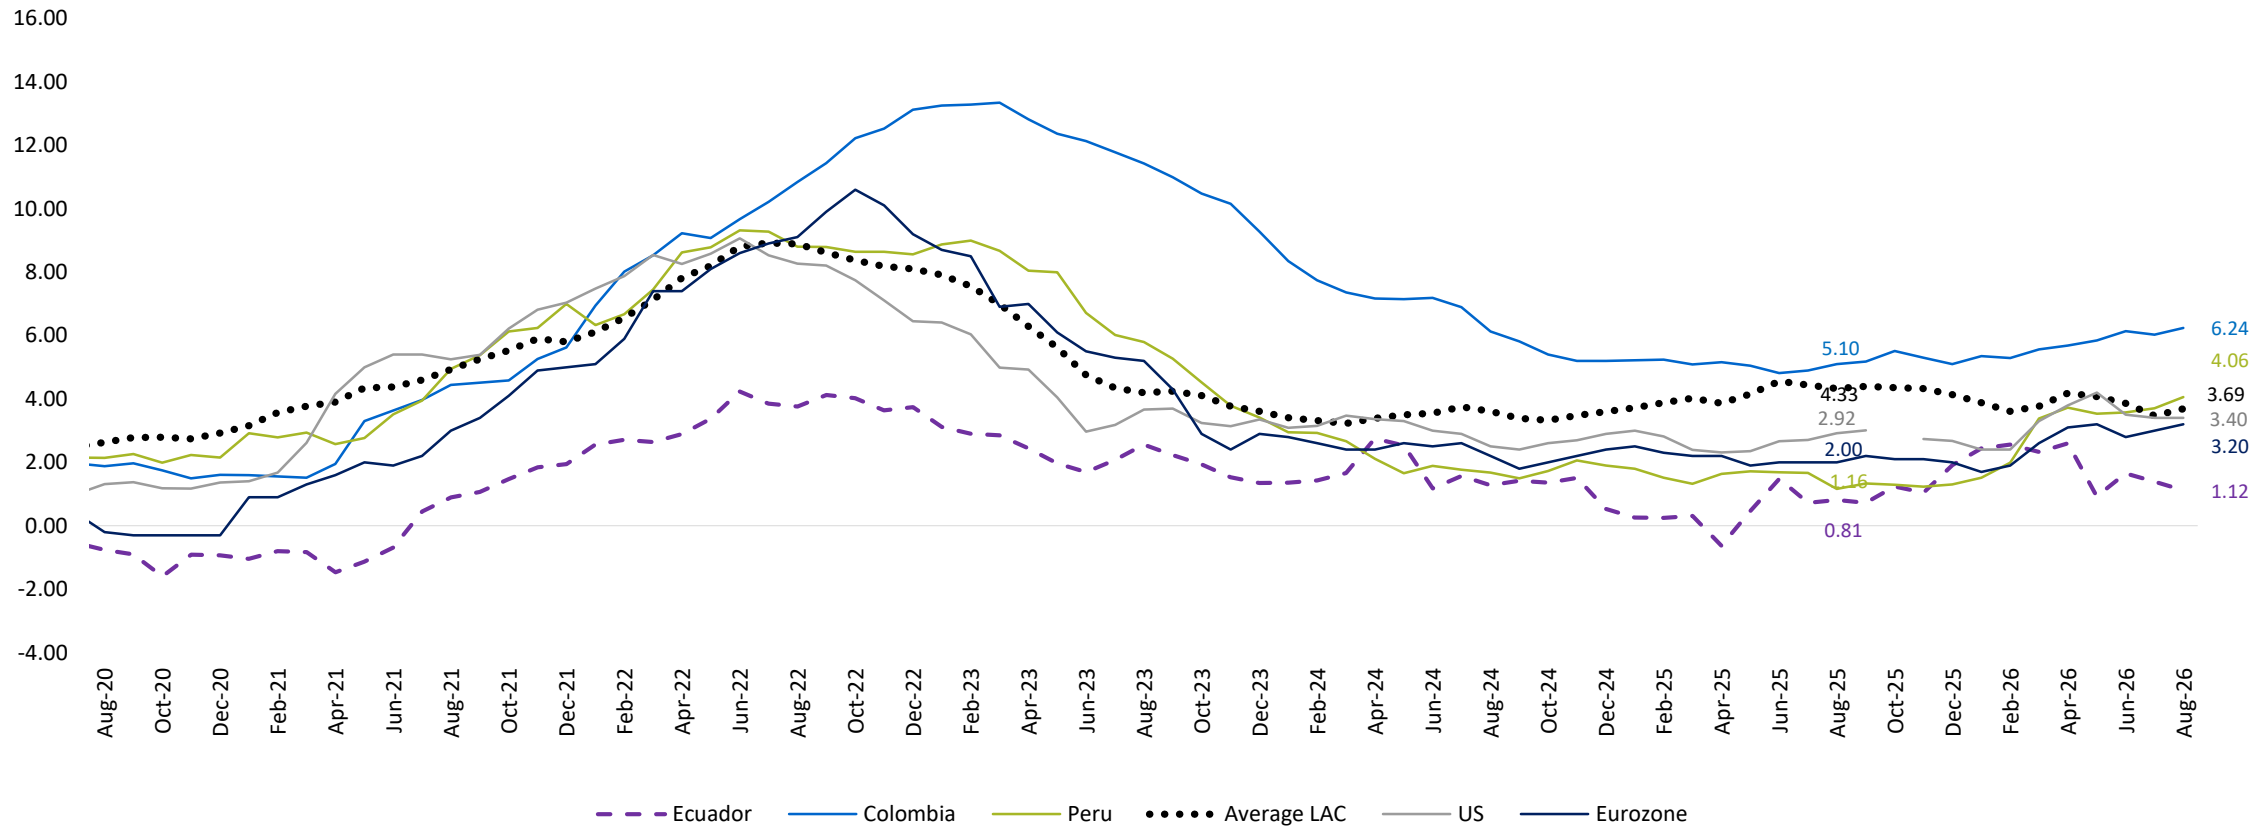

Source: INEC

International Inflation

Compared to the regional average, Ecuador generally has a stable and low inflation rate, mainly due to effective control of price pressures. It is worth mentioning that Ecuador has a lower inflation rate than the Eurozone, the United States, Colombia, Perú and the regional average.

> Annual international headline inflation August 2020-2026 (YoY rates of change %)

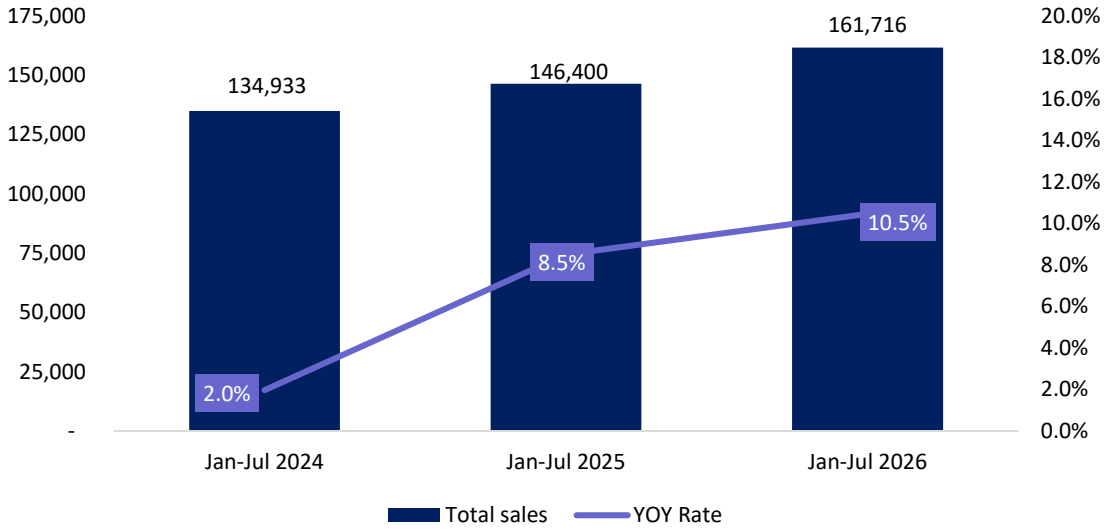

Source: INEC, National Statistical Offices of each country.

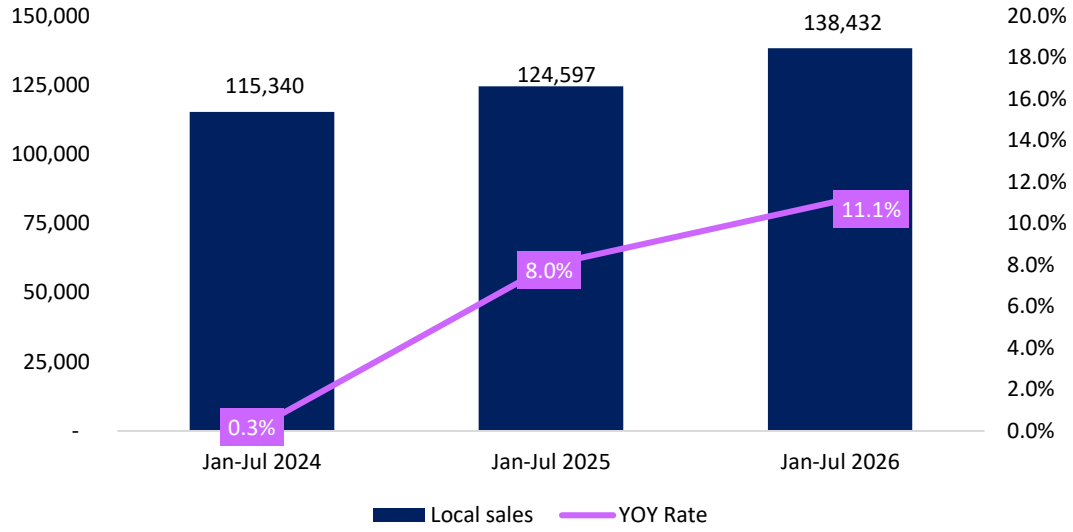

Sales

Total sales rose 10.5% YoY between January-July 2025 and the same period of 2026, consistent with the positive performance of non-oil exports and the general economic recovery.

> Total sales Jan-Jul 2024-2026 (USD million and YoY rate)

> Local sales Jan-Jul 2024-2026 (USD million and YoY rate)

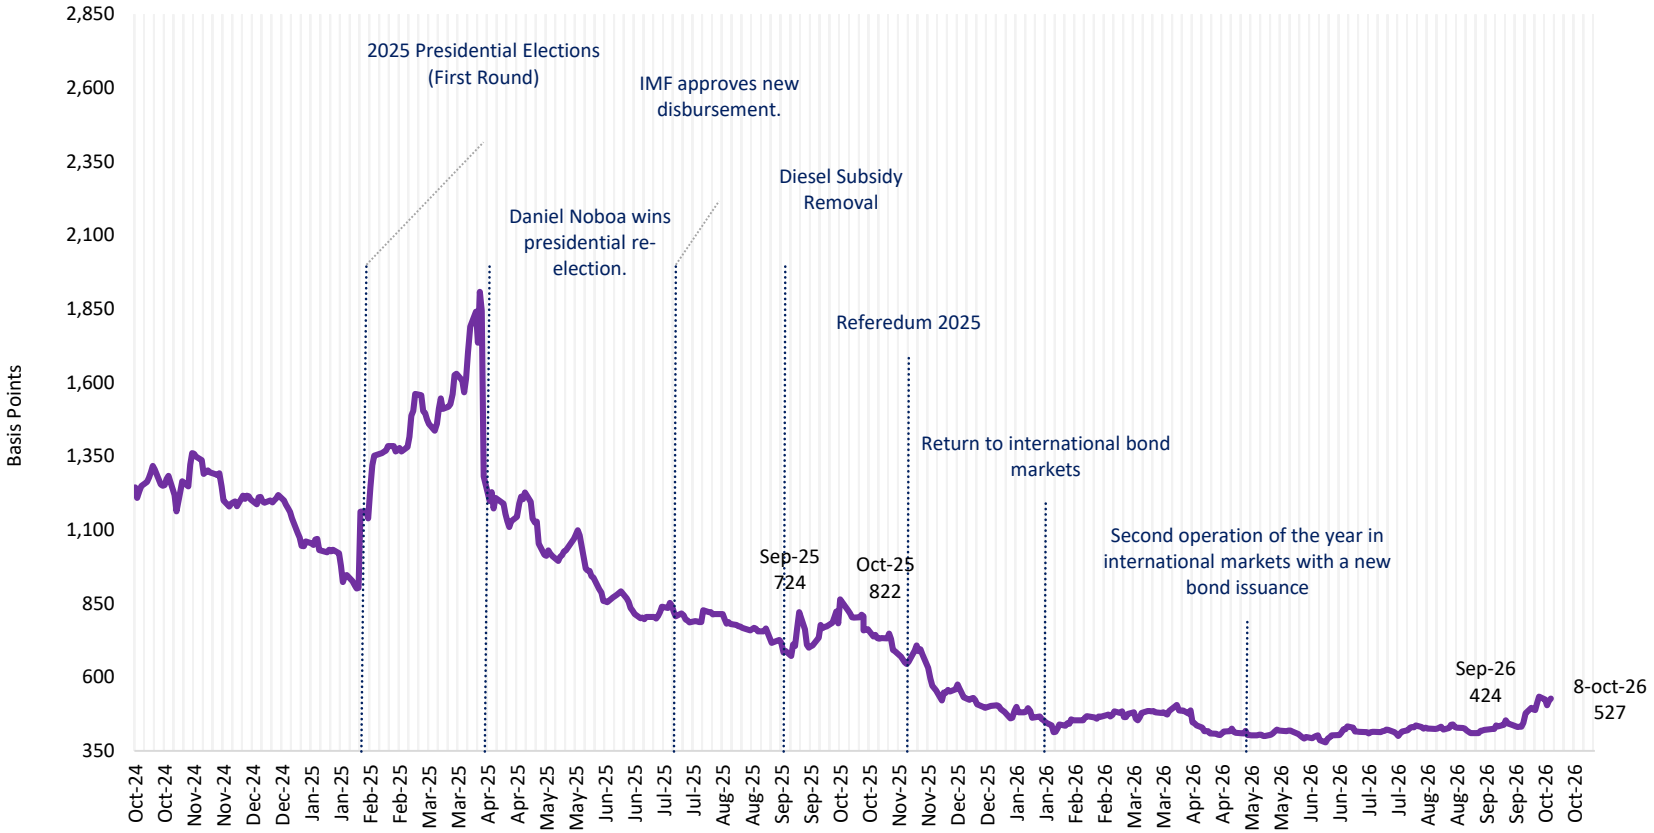

Source: SRI-Saiku (September 4th, 2026)

EMBI

As of September 2026, the EMBI remained close to 500 basis points throughout the month. Despite the global economic uncertainty, Ecuador maintains a stable perspective.

> EMBI Performance 2024–2026 (basis points)

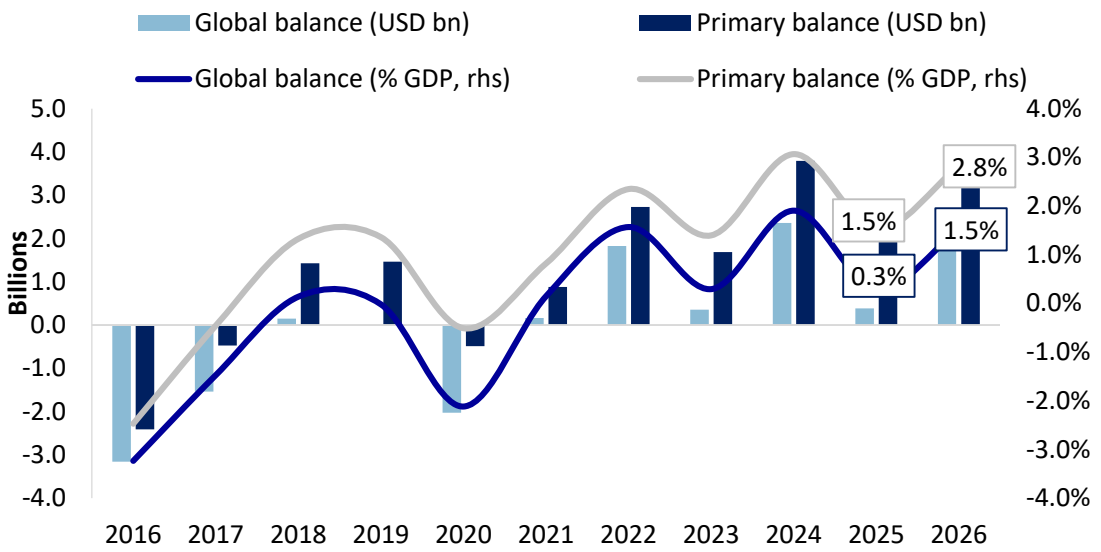

Source: JP Morgan

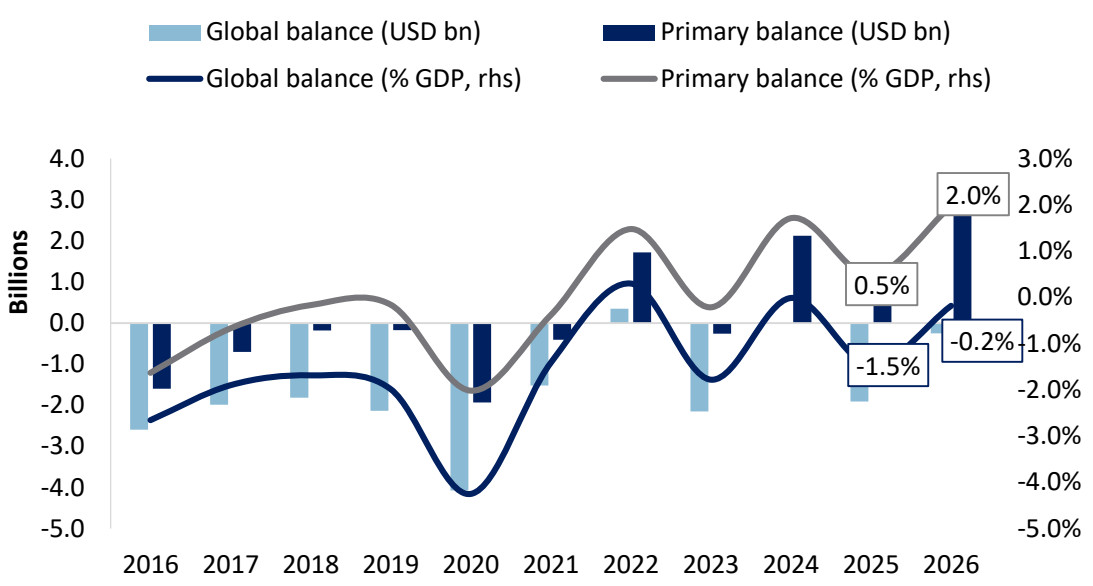

Public Finance

The overall results of the NFPS and the GSB in early 2026 indicate a fiscal improvement linked to higher oil and non-oil revenues.

> Non-Financial Public Sector - NFPS (Jan-Jun 2016-2026)

> General State Budget - GSB (Jan-Jul 2016-2026)

Responsible management of public finances strengthens macroeconomic stability and creates space to boost the economy.

Financial and monetary outlook

GOBIERNO DEL
ECUADOR

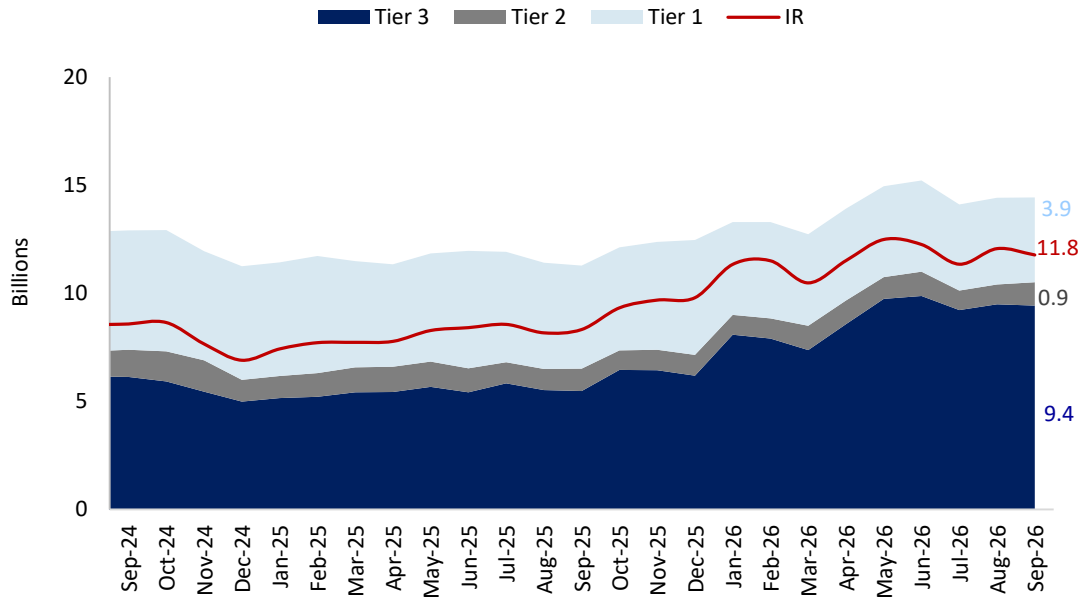

International Reserves

Ecuador remains committed to sustaining dollarization through its endogenous capacity, as the Central Bank has maintained almost full coverage (100% Tier 1 and Tier 2; and 71.8% Tier 3) of it liabilities with international reserves (USD 3.453 millions increase between sep-25 and sep-26). Throughout 2026 international reserves showed an upward trend.

> International Reserves (billions of dollars, as of September 30, 2026)

> International reserves and central bank liabilities (billions of dollars, as of September 30, 2026)

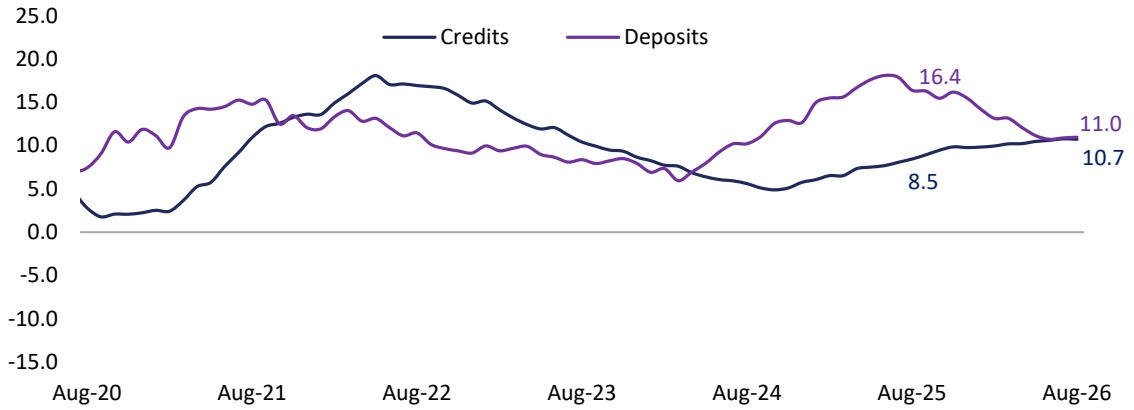

Source: CBE *The public sector includes the hydrocarbons sector and external debt disbursements
Tier 1: Deposits from other depository institutions, CB securities, currencies and other private sector deposits
Tier 2: Deposits from other financial institutions
Tier 3: Non-financial public sector deposits

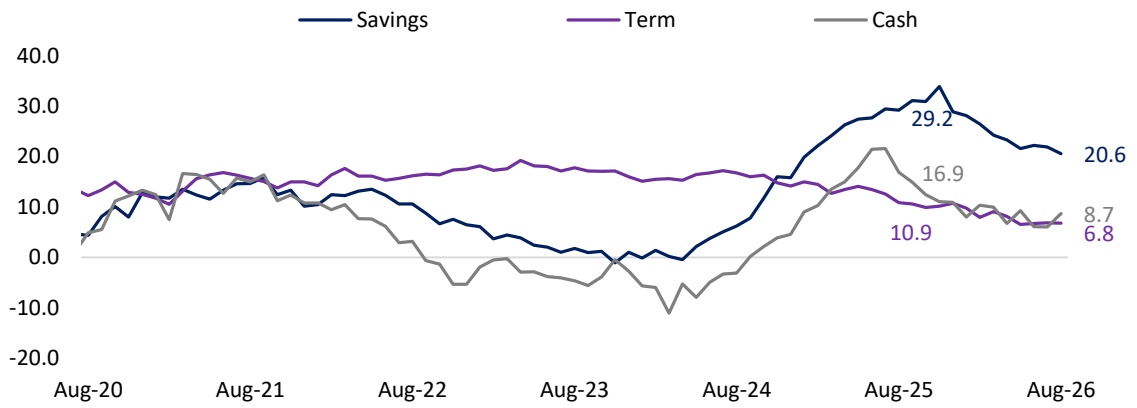

Financial sector indicators

Credit has shown signs of recovery since December 2024, with productive credit showing the strongest growth. Meanwhile, deposit growth (although at a slower pace than in previous months) continues to strengthen, which bolsters confidence in the national financial system.

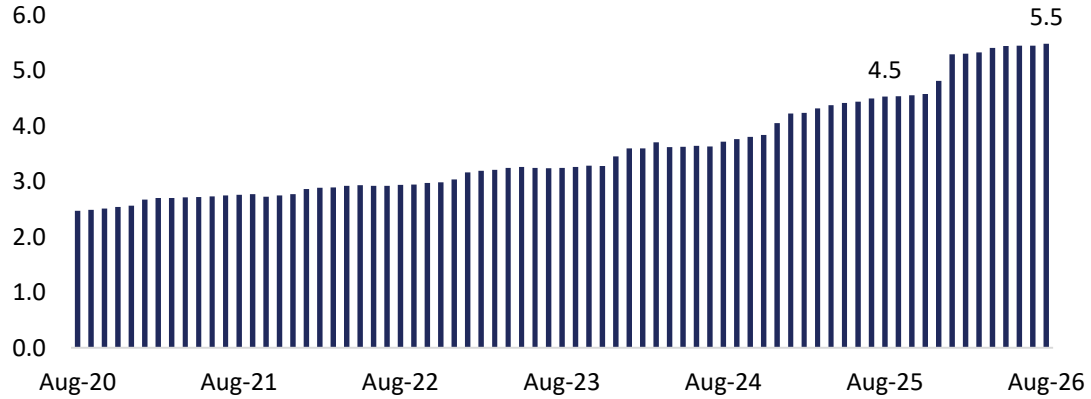

> Loans and deposits in the national financial system (YoY rates of change %, August 2020-2026)

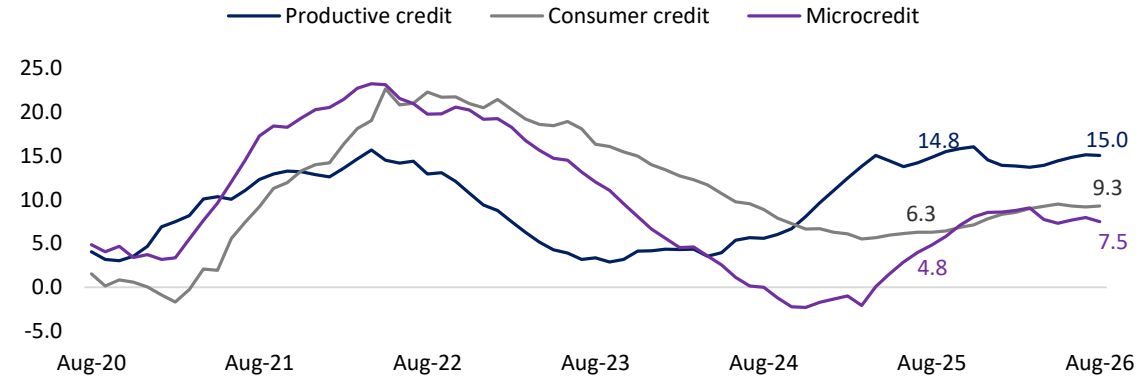

> Evolution of deposits in the national financial system (YoY rates of change %, August 2020-2026)

> Liquidity Fund (USD billion, August 2020-2026)

> Evolution of credits in the national financial system (YoY rates of change %, August 2020-2026)
